LOGO

Monochromatic or Single Color Logo

Laser Marking, Laser Engraving
Debossing, 1 color Screen Printing

LOGO

Colour Logo (separate)

UV Printing, Screen Printing,
Digital Printing

LOGO

Gradient Logo

UV Printing, Digital Printing,
Sublimation, Heat Transfer.

BRANDING

SCREEN PRINTING

The process whereby a logo is exposed into a mesh screen. Ink is then placed onto the screen and squeegee pushes the ink through the screen in the areas where the logo has been imposed.

DIGITAL PRINTING

A method of printing from a digital-based image directly to a variety of media. It usually refers to professional printing where small run jobs from desktop publishing and other digital sources are printed using small / large-format and / or high-volume laser or inkjet printers.

PAD PRINTING

A Printing process that transfer 2D image onto a 3D object. The unique properties of the silicone pad enable it to pick the image up from a flat plane and transfer it to a variety of surfaces, such as cylindrical, spherical, compound angles, textures, concave, or convex surfaces.

UV PRINTING

UV Printing is a form of digital printing that uses Ultra-violet lights to dry or cure the ink as it is printed. The printing method is best for branding that involves gradation effect and articles that need edge to edge printing.

HEAT TRANSFER PRINTING

A digital image is printed onto a special vinyl surface, which is then placed into the product. The product is then placed in a heat press machine, where heat will merge the vinyl and the product.

3D ENGRAVING

3D Laser engraving, which is a subset of laser marking, is the practice of using lasers to engrave letters, logo or even images inside the crystal which will be scaled to size and reproduced with exactly defined strokes.

Almost every product in this catalogue can be branded, Selecting the correct branding method is needed to ensure maximum exposure of your logo.

SUBLIMATION PRINTING

A process done by way of full-colour printer which is fitted with special sublimation inks. The logo is printed onto a special transfer paper, then placed into the product where heat is applied causing the inks to migrate from paper to product.

EPOXY DOMING

Doming is used to create a version of your logo by shaping a raised surface beneath the print. A mould is formed, printed and filled with epoxy which then is hardened to maintain its shape.

DEBOSSING

Debossing is the opposite of embossing as you are creating an indent in the material you are using. A metal die is stamped onto the front of the material you are using causing depressions that leave a imprint of the image on your products.

FOILING

Foil printing is a speciality printing process which uses heat, pressure and metallic paper (foil). This is used to create different shiny designs and graphics on various materials.

METAL MARKINGS

A logo is etched into a product with a laser beam, replicating the logo with precise accuracy. The laser "burns" the top layer of the product off and reveals the layer beneath.

LASER CUTTING & ENGRAVING

A sheet of Acrylic have been used to replace less durable materials like glass in many different ways. Laser can cut through some pretty powerful stuff, even materials as hard as aluminium sheets, plastics and acrylic sheets.

USB Flash Drives

Available in Wide range of Designs, Colors & Capacities.

USB flash drives makes an impressive & practical corporate Gifts while promoting your brand at the same time.

We are committed to be your most reliable source of USB flash drive in the Middle East.

We specialize in importing quality USB Flash Drives for promotional purposes. Our USB Flash Drives are sourced from reputable factories using quality components such as Samsung or Toshiba and carry a warranty against defects. We pride ourselves on high standard levels and after sales services to ensure you peace of mind when dealing with us.

Reasons why you choose us as your USB Flash Drive source.

- We import original chips separately and after testing & quality checking, We fix them in USB shells.
- We never import duplicate or upgrade chips and we offer warranty against defect.
- Fast delivery from ready stock.
- Big variety and range of products to select.
- Competitive prices with higher quality.
- Mock Ups and E-Samples

What are upgraded chips?

Unfortunately some manufacturers using a lower capacity memory and selling as a higher capacity memory.

What are upgraded chips?

(1) They use a software to upgrade 1 GB to 4GB. When using the chip in your computer it shows 4GB but can't accept files more than 1 GB because the real capacity is 1 GB.

(2) They use 4 pcs of 1 GB chip instead of 1 piece 4 GB memory. When you save a file more than 1 GB it will show an error and if you save a file less than 1 GB it will be saved but when you need to reopen the file, as it is not clear in which one of the chips is saved. again it will show an error.

**We never use upgrade chips
We use only original chips!**

USB-62

Metal USB Flash Drive

Material : Stainless steel (Gun metal)
 Size : 45 x 12 x 10 mm
 Capacity : 4, 8, 16 or 32 GB.

Printing Options :

Size : 63 x 33 mm
Available Capacity : 8 GB.

Printing Options:
• Laser Engraving

OTG Technology

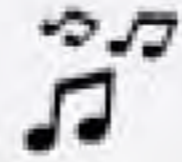

Data transfer between platforms without inconvenient cables.

USB OTG products can easily communicate with each other without the need of a personal computer. For instance, you can directly connect a digital camera to a mobile phone, as long as the device is both OTG-compatible.

Transfer, store and read data on mobile devices

Just a Pen?

Production

Our highly automated assembly lines guarantee rapid, extremely competitive manufacturing times: depending on the model, our machinery can assemble from 2,000 to 6,000 pcs per hour. Automation also means guaranteeing functionality: strict quality checks make sure that all our pens operate perfectly at each stage of their assembly.

Planning

Not everyone knows that it can take more than a year to create a new pen in which every detail is handled with meticulous care. Creating the moulds for each component of the pen is a highly complex operation: a mistake of even a hundredth of a millimetre could jeopardise its operation. This is why all our pens are designed and manufactured entirely in our only Italian premises, where we are able to monitor every stage: from the first prototypes right down to marketing the finish products.

Design

The design of our pens is the outcome of ongoing styling research: the lines and colours are inspired by the trends of the day. A promotional pen must attract and excite, as well as being a quality support for the message it is delegated to convey. Appearance, originality, quality: everything must be perfectly balanced to make a pen worthy to carry a uniquely special company image.

Quality

Attention to quality starts with the strict selection of raw materials: the plastic, refills and inner springs come exclusively from Italian or German suppliers, who guarantee their quality and reliability. The plastic for our pens comes from top quality, non-toxic ABS, which is highly resistant to knocks and sudden changes in temperature, guaranteeing excellent glossiness & high colour stability. The refills respect EU Directives for hazardous substances (2004 / 73 / EC, 67 / 548 / EEC and 2006 / 1907 / EC - REACH) and the American TSCA (Toxic Substances Control Act): so all the inks are non-toxic.

Sustainability

Only a quality pen can really enhance a message, growing a brand's visibility and, why not, helping to limit the pollution of the planet. Plastics pollute: if a pen is high quality it will have a long average lifespan that will lead it to change hands more than once, so limiting the waste that comes from the immediate discarding of faulty pens. It is much better to invest in quality pens, maybe choosing to limit the quantity rather than running the risk of compromising your image and spreading the irresponsible use of plastic pens. The longer a pen's life is, the less it pollutes the environment.

Customisation

Once assembled, the pen is ready to be "dressed" with a logo or a message: our graphics office works on digital simulations to assess the possible alternatives, suggesting new proposals so that the most suitable combination can be found. Like a tailor's shop, the customer can try different sizes, colours and positions until the suit adapts perfectly to his needs. Only then does the pad or silk-screen printing stage begin, using highly resistant paints, after which the pen is finally ready to travel the world with its precious message: your image.

Responsibility

The certificate of origin for our pens also guarantees that no child labour is involved in their manufacture, nor working conditions that do not respect workers' basic rights. We demand the same guarantee from our Italian and German raw materials suppliers. Even a pen can help to spread the culture and respect of the dignity of workers.

“A Significant step forward toward the use of safe plastic.”

“Made from a special plastic, suitable for use in toy manufacture.”

Antibacterial

It is made of **antibacterial plastic** containing a special additive which releases silver ions that prevent bacteria from colonising the surface of the pen.

Really Safe

The plastics employed with **European and American FDA food contact regulations.**

LOVING
NATURE

Antibatterica,
atossica e sostenibile.
Una penna che dura
ama la natura.

CLP compliant

It is rated as **non hazardous** the Regulation on Classification, Labelling and Packaging.

Nature friendly

Made of non-toxic plastics, it has been **designed to have a long life** and to minimize the risk of harmful substances being released into the environment.

Using a pen for as long as possible helps to reduce pollution and enables us to give full expression to the concept of promotion.

Green Chemical

It does not contain dioxin, phthalates, bisphenol A, antimony, arsenic, barium, cadmium, chrome, mercury, lead, polybrominated biphenyls (PBBs), polybrominated diphenyl ethers (PBDEs) or deca-BDE, and **conforms to RoHS**

Looking to the future

Looking to the future, Made of plastic suitable for toy manufacture (according to European standard EN 71-03 and U.S. FDA regulations).

“ Design that combines safety and environment friendliness.”

Antibacterial, non-toxic and sustainable.
A pen that lasts is a pen that loves nature.

Jotter

Instantly noticed, Jotter stands as an authentic design icon of the last 60 years. With covetable colours and a distinctive shape, Jotter remains Parker's most popular pen, recognizable down to its signature click.

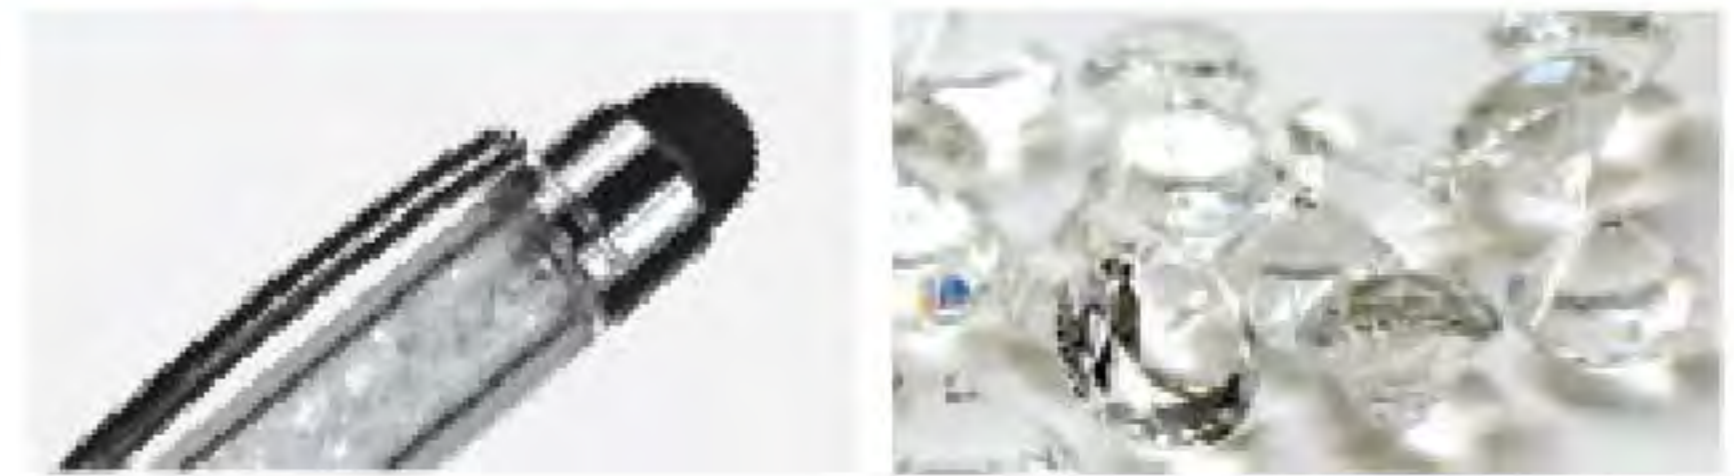

IM Rollerball

Parker IM's modern design offers timeless finishes successfully combining classic and contemporary styles. The finest grade of lustrous lacquer and chrome, and a highly engineered manufacturing process, ensure the Parker quality known worldwide.

IM Ballpoint

Parker IM, highly professional and reliable. An ideal partner with unlimited potential. With a durable stainless steel nib and finishes that echo the Parker legacy, every detail is refined to deliver a writing experience that is always dependable.

Sublimation Solutions

Dye sublimation is a digital printing technology that enables the reproduction of colourful images on common everyday items, including clothing and novelties.

You create an image on your computer, print it onto a special transfer paper using sublimation inks, and then apply the paper with the image to the item to be decorated.

We offer a large collection of Blank Products that you can use for your Sublimation Projects.
